

## ABOUT SEDATION

Sedation dentistry is a method used to help patients relax during dental procedures by using medication. It's especially helpful for those with dental anxiety, low pain tolerance, or who need a lot of work done at once. Depending on the level needed, sedation can range from mild (you're awake but calm) to deep (you're almost or fully asleep). Common types include nitrous oxide (laughing gas), oral sedatives, and IV sedation.

## SEDATION DENTISTRY FOR ADULTS

Some patients as a group tend to avoid dental visits for a variety of reasons, including: more pressing medical concerns, anxiety from past experiences, the hardship of transportation, or fixed incomes. Once their oral health has reached an unmanageable point, fear and embarrassment further keep these patients away from the dentist.

For Adult patients embarrassed or fearful of their current oral state, sedation dentistry provides the opportunity for Dr. Sri to treat these conditions while the patient remains relaxed and unaware until "awaking" to an improved oral state!

Sedation Dentistry for the Special needs.

It may be especially difficult for people with disabilities to obtain access to proper dental care. They must find a dentist who is skilled and compassionate, and who can provide services for which some dentists may not be qualified. At Roseville Smiles, we provide the expertise, state-of-the-art equipment, and dedication to assisting special-needs patients necessary to ensure great oral care for our patients.

Sedation Dentistry for the high fear

Dental phobia is a real, often overwhelming reality for thousands of people. Negative previous dental experiences, fear of needles or drills, and severe gag reflexes are just some of the reasons people feel extreme anxiety when thinking about visiting the dentist.

If you suffer from dental phobia- fear no more! At Roseville Smiles, we are committed to understanding the very real nature of your fears. Not only will our team treat you with delicacy and care, but oral sedation will allow you to experience dentistry in a whole new way.
