ROSEVILLE SMILES

SERVICE CATALOG

Service Name **Digital Dentures**

ABOUT DIGITAL DENTURES

A denture or a complete denture as it is often called, is an appliance that is inserted in the mouth, replaces natural teeth and provides support for the cheeks and lips.

DIGITAL DENTURES

A Personalized Approach to Replacing Missing Teeth

Replacing missing teeth can help you feel more confident when smiling, speaking, and eating. At Roseville Smiles, we use digital technology to help create dentures designed around your smile, bite, and individual needs.

Whether you are considering dentures for the first time or replacing an existing set, Dr. Sri will explain your options and help you plan your care.

What Are Digital Dentures?

Digital dentures use computer-assisted design and manufacturing as part of the denture-making process. Records of your mouth and bite help guide the shape, tooth arrangement, and appearance of your restoration.

Digital technology supports the process, while clinical evaluation, fitting appointments, and adjustments remain important parts of your care.

Understanding Your Options

Dentures After Healing

Conventional dentures are fitted after any necessary extractions and an appropriate healing period.

Immediate Dentures

Immediate dentures are prepared before extractions and placed when the teeth are removed. As your mouth heals and changes shape, adjustments, relining, or replacement may be needed.

Implant-Retained Dentures

For suitable patients, dental implants can help secure a removable denture and improve stability. Dr. Sri will evaluate whether this option is appropriate for you.

What to Expect

Your care begins with an examination and a discussion of your goals. We will explain the recommended process, anticipated appointments, costs, and maintenance needs.

New dentures take time to become familiar. Follow-up visits allow us to check your comfort, bite, and fit.

Schedule a Consultation
